Centre for Research (CFR) is constantly working to motivate young research scholars to pursue more in research and produce excellent outcomes. Socially relevant research with sustainability aspects is the need of the hour. This can be accomplished by bringing the culmination of research ideas from diverse people in industry and academia. A platform to discuss the key issues and challenges in specific engineering domains will enable research scholars to pursue studies in cutting-edge technologies and their applications in solving the problems identified. This international conference is planned to bring in eminent researchers and academicians to discuss and disseminate research ideas in the implementation of Artificial Intelligence (AI) and the Internet of Things (IoT) for infrastructure and Industry.

The conference will host pre-conference workshops, keynote addresses, research paper presentations and panel discussions on AI and IoT.
